

Web Programming Assignment

Title: Car Sales Management Web Application

Objective

Create a **dynamic web application** using **HTML, CSS, and JavaScript** to manage a **car sales system**.

Page & Navigation Structure

- **Home / Dashboard**
- **Car Management**
- **Sold Cars**
- **Settings**

(Simple menu or navbar)

Application Scenario

A car showroom system where users manage cars available for sale and sold cars.

Car Information

Each car should have:

- Car Name
- Company
- Price
- Model Year
- Status (Available / Sold)

Functional Requirements

- Display cars in a table or list
- Add new car using HTML form
- Update car details using JavaScript
- Delete car record
- Move sold cars to **Sold Cars page**

Technical Requirements

- HTML5 for structure
- Bootstrap for styling
- JavaScript for DOM manipulation & logic

- No frameworks required
